JS-CC-005 : Email Validation

Purpose of the this coding challenge is to write a code that given email addresses, returns the emails valid or invalid.

1 - Create an HTML page and take input from user.

2 - Verify input valid or not and give output to html file.

- Valid email addresses must follow these rules:
 - a. It must have the username@websitename.extension format type.
 - b. The maximum length of the extension is 3.

Learning Outcomes

At the end of the this coding challenge, students will be able to;

- Analyze a problem, identify and apply programming knowledge for appropriate solution.
- Demonstrate their knowledge of algorithmic design principles by using JavaScript and Python effectively.

Problem Statement

- Write a function that takes email variable and return `true` or `false` and write console and page `invalid` or `valid`.
- Please note that, extension length can be 2 or 3 letters(For example: `.co`, `com`.)

⌚ Happy Coding 📝
